## ERARCAL ${ }^{\circ}$ <br> INSTA-MOLD EAR PROTECTORS ATTENUATION TEST REPORT

| Report prepared for: | Mr. Terry S. Griffing |
| :--- | :--- |
|  | Director, National Sales |
|  | Starkey Laboratories, Inc. |
|  | World Headquarters |
|  | 6700 Washington Ave., S. |
|  | Eden Prairie, MN 55344 |

|  | Cabot Safety Corporation's $\mathrm{E} * \mathrm{~A} \cdot \mathrm{RCAL}{ }^{\text {sm }}$ Acoustical Laboratory |
| :---: | :---: |
| NVUAD | is accredited by the National Institute of Standards and Technology, |
|  | National Voluntary Laboratory Accreditation Program, for hearing |
|  | protection device attenuation testing per ANSI S3.19-1974 and |
|  | ANSI S12.6-1984. |

Manager: Elliott H. Berger, Mem. INCE This report contains 6 pages:

| Address: | Cabot Safety Corporation | 1) summary test data |
| :--- | :--- | :--- |
| 7911 Zionsville Road | 2) individual subject data |  |
|  | Indianapolis, IN $46268-1657$ | 3) extreme range test |
|  | phone: $317-692-6666$ | 4) extreme mean value test |
|  | fax: $317-692-3116$ | 5) computation of the NRR |
|  |  | 6) subject characteristics |

For a complete description of the testing procedures involved in generating this report, see the following Cabot Safety Corporation Technical Reports:

Performed by: Ronald W. Fugee Reviewed by: Sr. Acoustical Technician
 Manager, Acoustical Engineering

Test ID: C37401 Device: Insta-Mold Customized Ear Protectors
Date: 1/5/93 Samples: 10 Position: NA Comfort:
3.8

Comments: Tested with Tasco Ultimuff [158602]. TLS retest data. Impressions, made using syringe and foam dam, extending past the first bend, but not past second bend.
Two coats of Insta-Seal Plus applied prior to testing.

Extreme value rejected if $r>0.551$. Two-sided test of significance at $p<0.05$.
Rejected values are shaded.

## Calculation of the Noise Reduction Rating (NRR)*

Test ID: C37401 Device: Insta-Mokd Customized Ear Protectors

| 1/3 Octave Band Center Frequency ( Hz ) | 125 | 250 | 500 | 1000 | 2000 | 4000 | 8000 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 7. Assumed pink noise | 100 | 100 | 100 | 100 | 100 | 100 | 100 |  |
| 2. C-weighting values | -0.2 | 0.0 | 0.0 | 0.0 | -0.2 | -0.8 | -3.0. |  |
| 3. Unprotected C-weighted levels (step $1+$ step 2) | 99.8 | 100 | 100 | 100 | 99.8 | 99.2 | 97.0 | $107.95 \mathrm{dBC}^{*+*}$ |
| 4. A-weighting values | -16.1 | -8.6 | -3.2 | 0.0 | 12 | 1.0 | -1.1 |  |
| 5. Unprotected A-weighted levels (step $1+$ step 4) | 83.9 | 91.4 | 96.8 | 100.0 | 1012 | 101.0 | 98.9 |  |
| 6. Mean attenuation at frequency** | 34.1 | 33.9 | 35.4 | 328 | 36.4 | 44.8 | 46.7 |  |
| 7. Standard deviation at frequency ( $x 2$ ) ** | 11.8 | 10.8 | 9.4 | 5.6 | 7.7 | 7.2 | 8.8 |  |
| 8. Protected $A$-weighted sound levels $(\operatorname{step} 5-\operatorname{step} 6+\operatorname{step} 77$ | 61.6 | 68.3 | 70.8 | 72.9 | 72.5 | 63,3 | 61.1 | 77.85 dBA*** |
| 9. $N R R=($ step $3 \log$ sum $)$ NRR = | $\begin{array}{r} \text { tep } 8 \text { lo! } \\ 27.1 \end{array}$ | sum) - | B corre | on factor |  |  |  |  |

*Computations per EPA (1979). Computations are done with 15 significant digits in the computer. It NRR is computed from rounded values in rows 6 and 7 of this table, errors of up to 0.1 dB may occur. All values in dB .
** $4000-\mathrm{Hz}$ values are mean of 3150 Hz and 4000 Hz data. $8000-\mathrm{Hz}$ values are mean of 6300 Hz and 8000 Hz data.
*** Logarithmic sum. All logantihns to base 10.
${ }^{* * * *}$ Values shown to 0.1 dB . However, labeled NRRs are to be rounded to integer values, with values ending in 0.5 rounded to the next lower whole number.

## Age, Gender, and Anatomical Data for Test Subjects
